

LOGI-LEVER

THE FIRST COMPLETE AND PROFESSIONAL INTEGRATION OF STEERING WHEEL CONTROLS IN AFTERMARKET

The Automotive sector offers increasingly complete and innovative steering wheel command control systems for newly produced vehicles for the management of radios and other devices.

However, there is a multitude of cars and commercial vehicles that are completely devoid of steering wheel control systems.

LOGI-LEVER is a simple, elegant and fully integrated **aftermarket solution to equip all vehicles that do not have them with steering wheel controls**, so as to be able to control any type of car radio (OEM or aftermarket).

The main features of LOGI-LEVER are:

- **Management of the VOLUME function**
- **Management of the SEEK function**
- **Management of the PHONE function**
- **Management of the MUTE function**

Why choose LOGI-LEVER

How to connect LOGI-LEVER?

LOGI-LEVER connects easily via included dedicated wiring.

Is it simple to install the LOGI-LEVER steering wheel control lever?

Installation is simple and within the reach of every installer: simply drill a small hole in the steering column* to insert the steering wheel control lever fixing bolt and then connect the wiring to the LOGI-LEVER interface, in turn connected to the car radio.

Which radios are compatible with the use of LOGI-LEVER?

LOGI-LEVER allows the management of all steering wheel controls of all aftermarket car radios (such as Clarion, Kenwood, Alpine, Jvc etc.) and all OEM radios in the compatibility list.

What car radio protocols does it work with?

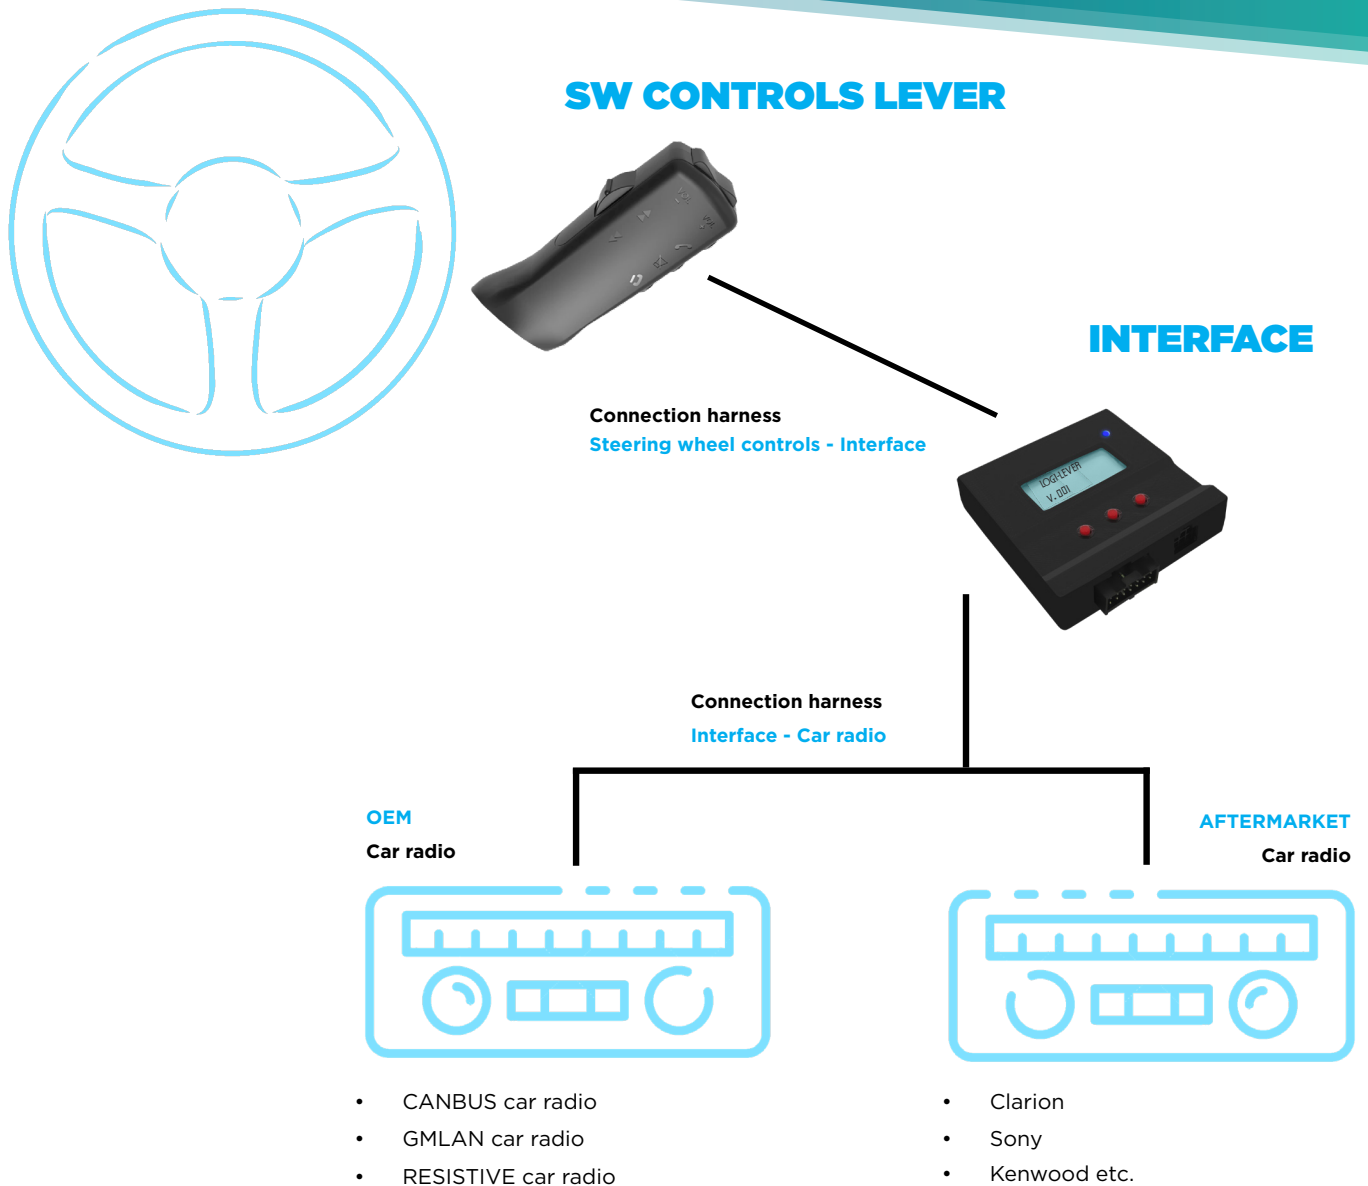

LOGI-LEVER is able to manage CANBUS, GMLAN and RESISTIVE protocols in self-selection or with a simple manual selection.

*installation of the lever
on the steering column

(LOGI-LEVER can be installed
both on the right and on the left
of the column)

LOGI-LEVER: the first SW Controls in aftermarket!

LOGI-LEVER: Available kits

CFR1023CVRS11

LOGI-LEVER basic

is the simplest kit and contains:
