

AUTOMOTIVE LINE

Professional solutions for CANBUS 2.0 and CAN FD vehicles

Services Interfaces

Slimcan 85

Canbus Services Interface

CODE: CF0006UNUN11/85

5 analog outputs available:

- 1 12V 1A output ignition ON
- 1 12V 100mA output lights ON
- 1 12V 100mA output reverse gear engaged
- 1 12V 100mA output speedpulse in square wave with PULL-DOWN (2 impulses cycles selectable)
- 1 GND 100mA output handbrake engaged.

Microprocessor PIC 18F4685.

UART 5V for protocols managing.

Car CANBUS protocols auto-selection.

Slimcan 2.0

Canbus2.0/FD Services Interface

CODE: SOON AVAILABLE

8 analog outputs available:

- 1 12V 1A output, preset as ignition ON
- 1 12V 100 mA output, preset as reverse gear engaged
- 1 12V 100 mA output, preset with activation below 10 km/h
- 1 12V 100 mA output speedpulse in square wave with PULL DOWN (4 impulses cycles selectable or engine RPM)
- 1 GND 100 mA output, preset as handbrake engaged
- 3 GND outputs to set
(of which 2 manageable as 12V positive inputs).

All the 8 outputs are configurable according to the Customer needs
(please, consult the 'Functions List' at page 8).

Microprocessor PIC 18F47Q84.
UART 5V for protocols managing.

Car CANBUS protocols auto-selection.

ECE approved product

EXAMPLE OF CONFIGURATION

Slimkey

Canbus Services Interface

CODE: CF0006UNSC11

1 analog output available:

- 1 12V 1A output, preset as ignition ON

The output is configurable according to the Customer needs (please, consult the 'Functions List' at page 8).

Slimkey 2

Canbus Services Interface

CODE: CF0006UN2011

2 analog outputs available:

- 1 12V 1A output, preset as ignition ON
- 1 GND 100mA output with PULL-UP, preset speedpulse signal

The 2 outputs are configurable according to the Customer needs (please, consult the 'Functions List' at page 8).

Slimkey OBD Plug&Play

Canbus Services Interface

CODE: CF0006UN2021/OB

2 analog outputs selectable:

- 1 output preset speedpulse 4K impulses per mile
(4 different impulses settable, 4K, 8K, 11.5K, 23K impulses per mile)
- 1 analog output selectable from the following:
 - output active up to 10Km/h
 - output active up to 10km/h with the vehicle in motion
 - output active above 40km/h (deactivated below 35km/h)
 - RPM signal
 - intermittent output with a heavy braking.

Car CANBUS protocols auto-selection.

CANBUS compatibility extends to:

- vehicles with OBD2 input and SAE-J2284 or ISO 15765 protocol
- vehicles designed since 2009, diesel or petrol engine.

ECE approved product

COMPATIBLE WITH:

Slimkey PDC

Canbus Services Interface

CODE: CF0006UN2021/PS

Preset CANBUS Services Interface able to recover the parking sensor signal and other vehicle sounds generated by the original radio.

- Quick installation
- High performance buzzer.

Car CANBUS protocols auto-selection.

ECE approved product

UPGRADEABLE

COMPATIBLE WITH:

Slimkey Front Parking Sensors

Canbus Services Interface

CODE: CF0006UNSC21/AF

Preset CANBUS Services interface able to activate aftermarket parking sensors equipped with 1 output available, preset as active output below 10 km/h (regardless of reverse gear).

The output can be configured according to needs, among the following options:

- output active below 10 km/h activation of reverse gear
- output active below 10 km/h with the vehicle in motion
- output active below 10 km/h with the vehicle in motion when the engine is activated or reverse gear is engaged
- output active below 10 km/h with handbrake disengaged
- output active below 20 km/h with reverse gear engaged.

Car CANBUS protocols auto-selection.

ECE approved product

EXAMPLE OF CONFIGURATION

COMPATIBLE WITH:

Services Interfaces

‘Functions List’ for the configuration outputs by the Customer:

1. Ignition ON
2. Lights ON
3. Reverse gear engaged
4. Handbrake engaged
5. OEM parking sensor signals
6. FCA “Blue & Me” Mute
7. Speedpulse signal 23.000 impulses per mile
8. Speedpulse signal 11.500 impulses per mile
9. Speedpulse signal 8.000 impulses per mile
10. Speedpulse signal 4.000 impulses per mile
11. Output active when the vehicle is moving
12. Output active when reverse gear is engaged and deactivated at speed above 10 km/h
13. Output intermittent upon heavy braking
14. Output active below 10 km/h
15. Output active below 10 km/h with the vehicle in motion
16. Output active with ignition ON and deactivated above 10 km/h
17. Output active below 10 km/h and handbrake OFF
18. Output active with vehicle moving above 40km/h and deactivated with vehicle moving under 35km/h
19. Output active with combustion engine running
20. Output active when reverse gear is engaged and deactivated when the vehicle is moving above 20 km/h
21. Output with high beam ON
22. Output RPM, Ratio 1:1 (the number of impulses per minute corresponds to the number of rounds per minute).
