MINIDAB: the strenghts

MiniDAB is an advanced tuner device that transforms the car radio into a high-performance DAB/DAB+ receiver capable of reproducing CD AUDIO quality!

The unit works by receiving digital signals from a DAB antenna and it modulates the signals to the FM/RDS radio installed in the vehicle.

MiniDAB is a universal interface compatible with all types of vehicles and of car radios that manage the FM/RDS function.

All the device's functions are manageable through a dedicated remote control.

All the information of the digital radio channel is displayed, via RDS, on the car radio display (for example: name of radio channel, title of played song, news, etc.).

The device allows to receive and manage up to 255 DAB channels and to store up to 40 favorite DAB channels.

The included universal wiring kit makes installation quick and easy.

MiniDAB is upgradeable!

Product's main features are:

- **Compatibility with all car and all radios supplied with FM/RDS**
- **Integrated DAB/DAB+ KEYSTONE module**
- **Audio quality comparable to CD AUDIO one**
- **User menu shown on the radio display via RDS**
- **Management via dedicated remote control**
- **FM stereo modulation on 8 selectable frequencies**
