# MEDIADAB HD: the strenghts

**MediaDAB HD** is an advanced tuner device that transforms car radio into a high-performance DAB/DAB+ receiver able to play in AUDIO CD quality!

**MediaDAB HD** is a universal interface compatible with all types of vehicles and all FM/RDS radios: it receives digital signals from a DAB antenna and modulates them to the FM/RDS radio installed in the vehicle.

Device functions can be managed through the steering wheel controls, using Canbus, GMLAN or resistive protocols or through a dedicated remote control (optional); furthermore, original functions of the steering wheel controls are maintained.

Digital radio channel information is displayed, via RDS, on the car radio display (for example: name of the radio channel, title of the played song, news, etc.).

The unit allows to receive and manage up to 255 DAB channels and store up to 40 favorite DAB channels.

**MediaDAB HD** uses **voice messages** in different available languages (by choice between: English, German, Italian, Spanish, French, Danish, Dutch, Norwegian). The unit can manage up to 3 languages.

This guarantees a valid solution to significantly increase the driver's safety level, thus avoiding visual distractions while driving!

A wide range of Plug&Play wiring makes installation easy and quick. For the list of available wiring, please click on this link: <https://automotive.paser.it/en-gb/Harnesses/Plug-and-Play-Interface-Harnesses-c75c81.html?filter=25>

**MediaDAB HD is upgradeable!**

## Technical Features

Power Supplying:	10/16 VDC
Consumption in working mode:	150 mA
Consumption in sleep mode:	<5 mA
Temperature range:	-20 +80 C
